

Pseudocode for Lab 2

- **Start**
- Take year1 and the number of patients in that year as input.
- Take year2 and the number of patients in that year as input.
- Calculate the percentage increase in patients:
 - $(\text{patients2} - \text{patients1}) / \text{patients1} * 100$
- Calculate total charity charges for each year:
 - $\text{charity1} = \text{patients1} * 1375.61$
 - $\text{charity2} = \text{patients2} * 1375.61$
- Display the total charity charges for both years and the percentage increase.
- **Stop**
